→ **Auto Realization for payment**
→ Ask Jamal/Aniju (procedure of realization)
→ realization shall be backend service in existing backend service
→ read the file and update the cheques automatically

——————

-> Add suspend column in all tables

Company.Companies

id	Title	Suspend
1	Asteco	
2	Colliers	
3	FABP	

Company.PropertyPortfolio
Add suspend columns everywhere

id	Title	suspend	CompanyId
1	DOF	false	Asteco
2	Emirates	false	Asteco
3	Colliers	false	Colliers
4	FABP	false	FABP

→Add Portfolio column in pms_property

Company.CompanyOffices

id	OfficeTitle	Emirate	Address	Phone	Email	Suspend
1	Abu Dhabi	Abu Dhabi				
2	Yas Island	Abu Dhabi				
3	Aldar Square					
4	Dubai officeI	Dubai				

Company. PortfolioOffices

id	Potfolioid	Officeid	suspend	active
1	**1**	**1**		

Company.PropertyPortfolioSettings

id	portfolioId	Key	Value
1	**1**	**MFChargePercentage**	**5**
2	**1**	**MFCollectionOn**	UpfrontOnContractPosting OnRentalChequeRealization

→ **Management Fee:** Update in property, and use the percentage from property on the transfer

→ Add locked yes no column in pms_proerpty: this column will protect the auto update on the customized management fee. On update system must notify the user that some properties are locked for auto updates and management

—> As the cheque the realized
→ immediately save the breakdown into a table called as PMS.TransactionBreakdown based on managementfee, and other distributions account as we have to process these separately /independently
example

trxid	Account type	amount	distributed		
1	managementFee	1000	no		
1	dof	3000	yes		
1	owner	1000	no		
1	opex	500	no		
1	sinkingAccount	200	yes		

dof-> auto create batch-> email to checker-> checker to submit-> approval
Distribution Items(Auto/manual)
→ when all the sinking amount is returned the add the percentage of sinking to DOF

→ DOF will be processed immediately
→ we will hold the status in this new table whether the amount is distributed or not

Invoices & InvoiceDetails
